VMI Solution™

CHASSIS AND SUSPENSION

COMPONENT PARTS

Selling to OEM manufacturers, we offer complete assembled products for Tie Rods and Ball Joints, Leaf Spring Bushings, Rubber Mounts, and Shock Absorbers. We also offer the individual component parts used in these products, too, such as castings, forgings, stampings, sleeves, rubber parts and more.

Our products are widely consumed in the global market.

PRODUCT DESCRIPTIONS

Tie rods connect the steering system to wheels, allowing the driver to turn the wheels left or right.

Ball joints connect steering knuckle to the control arm, allowing suspension to move up and down.

Control arm connects the wheel hub and steering to a vehicle's suspension system, allowing the wheels to move up and down.

Shock absorber is a component of a vehicle's suspension system that reduces impact of bumps .

Strut is a shock absorber with the coil spring and the top mount, called a **strut mount**, that is a bonded rubber bushing that separates the spring and shock absorber from the body.
