

FOR US, IT'S GOOD BUSINESS

We believe in providing personalized INVENTORY MANAGEMENT SOLUTIONS that seamlessly integrate our talented staff, and industry leading technology with each of our OEM and MRO customers.

“We improved our efficiencies of procurement and management of on-hand inventories dramatically when we engaged Purchase Partners as our inventory management solution. Our total realized cost savings accounted for cost reductions of 34% and a significant increase in cash flow. We only wish we would have integrated Purchase Partners into our supply chain sooner!”

OEM Customer

INVENTORY MANAGEMENT SOLUTIONS

VMI Solution is our advanced technology solution that seamlessly integrates your current forecasts, historical demand, and our on-site barcode audits, utilizing our unique software.

EZORDER.BIZ is our comprehensive vending solution, providing controlled inventory access, on-site, 24/7 to key MRO and safety products you need readily available, all the time.

3PL PLUS® is our Integrated Supply Solution that affords you an avenue to retain and connect good suppliers to Purchase Partners vendor managed inventory services within your manufacturing facilities.

VMI Solution™

YOUR CRITICAL LINK TO AN
ENHANCED SUPPLY CHAIN

for lean manufacturing

BSID AUTOMATED VMI SYSTEM

Hybrid Solution Integrating Forecasts,
Historical Demand, and On-Site Audits

Our **BSID Solution** streamlines the process of merging data, such as on-hand inventory, customer forecasts and historical demand, into a suggested replenishment quantity. In addition, this same technology infuses your current forecasts into our material requirements planning, driving the inventories we stock in our own warehouses. This solution is adaptive to changing demand and a hybrid of managed inventory solutions.

E-KANBAN SYSTEM

Central Stocking and Point-of-Use

Kanban is a visualized system where the removal of a bin creates a trigger for the product to be replenished by the supplier.

Often established as a two bin system, product is stocked in a central stocking location where staff on the manufacturing floor pull inventory from those bins in the quantities listed on their BOM.

In addition to monitoring inventory in a central stocking location, Purchase Partners can also offer Point-of-Use Kanban systems for those products that are routinely used on a specific manufacturing line or work cell, as well as three bin systems, too.
